

Don't know how intrested you are in an unlicensed operation but I thought you might like to know. CISCOR (Convergent Integreted Systems Corporation) 2411 Classen Norman, Ok. 73071 405-447-4955 has been using VHF/UHF frequencies 150.800 Mhz, 154.515 Mhz, 154.585 Mhz, 154.615 Mhz and 464.775 Mhz for at least 4 and a half years that I know of with out a license. I used to work for them but walked out in Feb. of 2003. Ethan Walker (president/owner) has probably bybassed or ignored about every rule and regulation that there is as far as radio spectrum use. Don't know if he has caused any interference to other licensed users in the area.He does run the mobile radios on dummy loads but the hand helds are open air operation. He also is reprograming radios with pirated software from several companys, Motorola in particular, with out knowledge of the software or test equipment to verify the radios correct operational specifications. He is not a licensed or authorized dealer for any radio manufacture.

Yes, this is from a disgruntled ex-employee. The man has broken,bent,ignored, bypassed, almost every rule in the book that he thinks he can get around with out someone suing him.

Just thought you might want to know.
